Craig

The sampling was done on June 14, 2008. The majority of the test results are back from the lab and Marc Boogey will be writing his report as soon as all results are in. The results that are back indicate no problems, per Marc, other than a small amount of soil that is contaminated.

More of the scrap metal has been removed from the site. I will have copies of the manifests to you within the next week. I will include a copy of the waste oil disposal manifest also.

Please contact me if you have any questions. Hopefully we are nearing the finish.

Marvin

Mr. Donius -

In May you provided the following brief update of your progress on-site (below). I understand that the sampling work was performed last Saturday. Please update your progress report to be current to the present time.

- A total of 35 loads of scrap metal have been taken to Ecology Scrap and Steel in Oceanside, CA. Approximately 5 loads remain for removal.
- All concrete block walls have been knocked down. The blocks are in a pile.
- 4 drums with residual oil have been pumped by Ashbury Environmental (4/14/08). Mr. Donius is submitting the associated Manifest. Empty drums and cylinders are staged in a holding area.
- The drinking water well has been repaired and is ready for sampling.

In particular, manifest copies are needed. They may be mailed to my attention at:
